## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-44 are rejected under 35 U.S.C. 102(e) as being fully met by Naples et al.

Naples et al discloses a karaoke system (Fig. 1) which comprises a processor 128, A/D converter (part of instruments 52,54,56 – not explicitly shown), D/A converter 122 (not explicitly shown), and a digital audio interface 78. See especially paragraph 0031.

Regarding Applicant's previous arguments, Applicant's claims do not require a "real musical instrument," Applicant's disclosure does not define a "real musical musical instrument," and the input devices 52,54,56 read on the musical instruments claimed. It is well-known in the modern art of electronic musical instruments that a drum pad 56, for example, is considered a musical instrument. Naples et al further discloses creating a mixed digital signal of both the processed digital audio signal of the musical instrument 50 and a digital audio file 1 16,120. See especially paragraph 0060.' Regarding the

'proper timing to allow the user to play in conjunction,' see guide track 30.

Claims 1-10, 16-24,30-39 are rejected under 35 U.S.C. 102(e) as being fully met by Miller.

Miller discloses a dynamically adjustable network method of playing along with music which comprises a processor 4, A/D converter (part of input devices 22,25,26 – not explicitly shown), D/A converter and digital audio interface 8.

Regarding Applicant's previous arguments, Applicant's claims do not require a "real musical instrument," Applicant's disclosure does not define a "real musical musical instrument," and the input devices 22,25,26 read on tie musical instruments claimed. It is well-known in the modern art of electronic musical instruments that a keyboard 22, for example, is considered a musical instrument. Miller further discloses creating a mixed digital signal of both the processed digital audio signal of the musical instrument 167 and a digital audio file 170. See especially Col. 10, lines 47-67. Regarding the 'proper timing to allow the user to play in conjunction' Miller uses time-stamping to accomplish this - see Col 13.
